

# Your 'Geographical' Journey

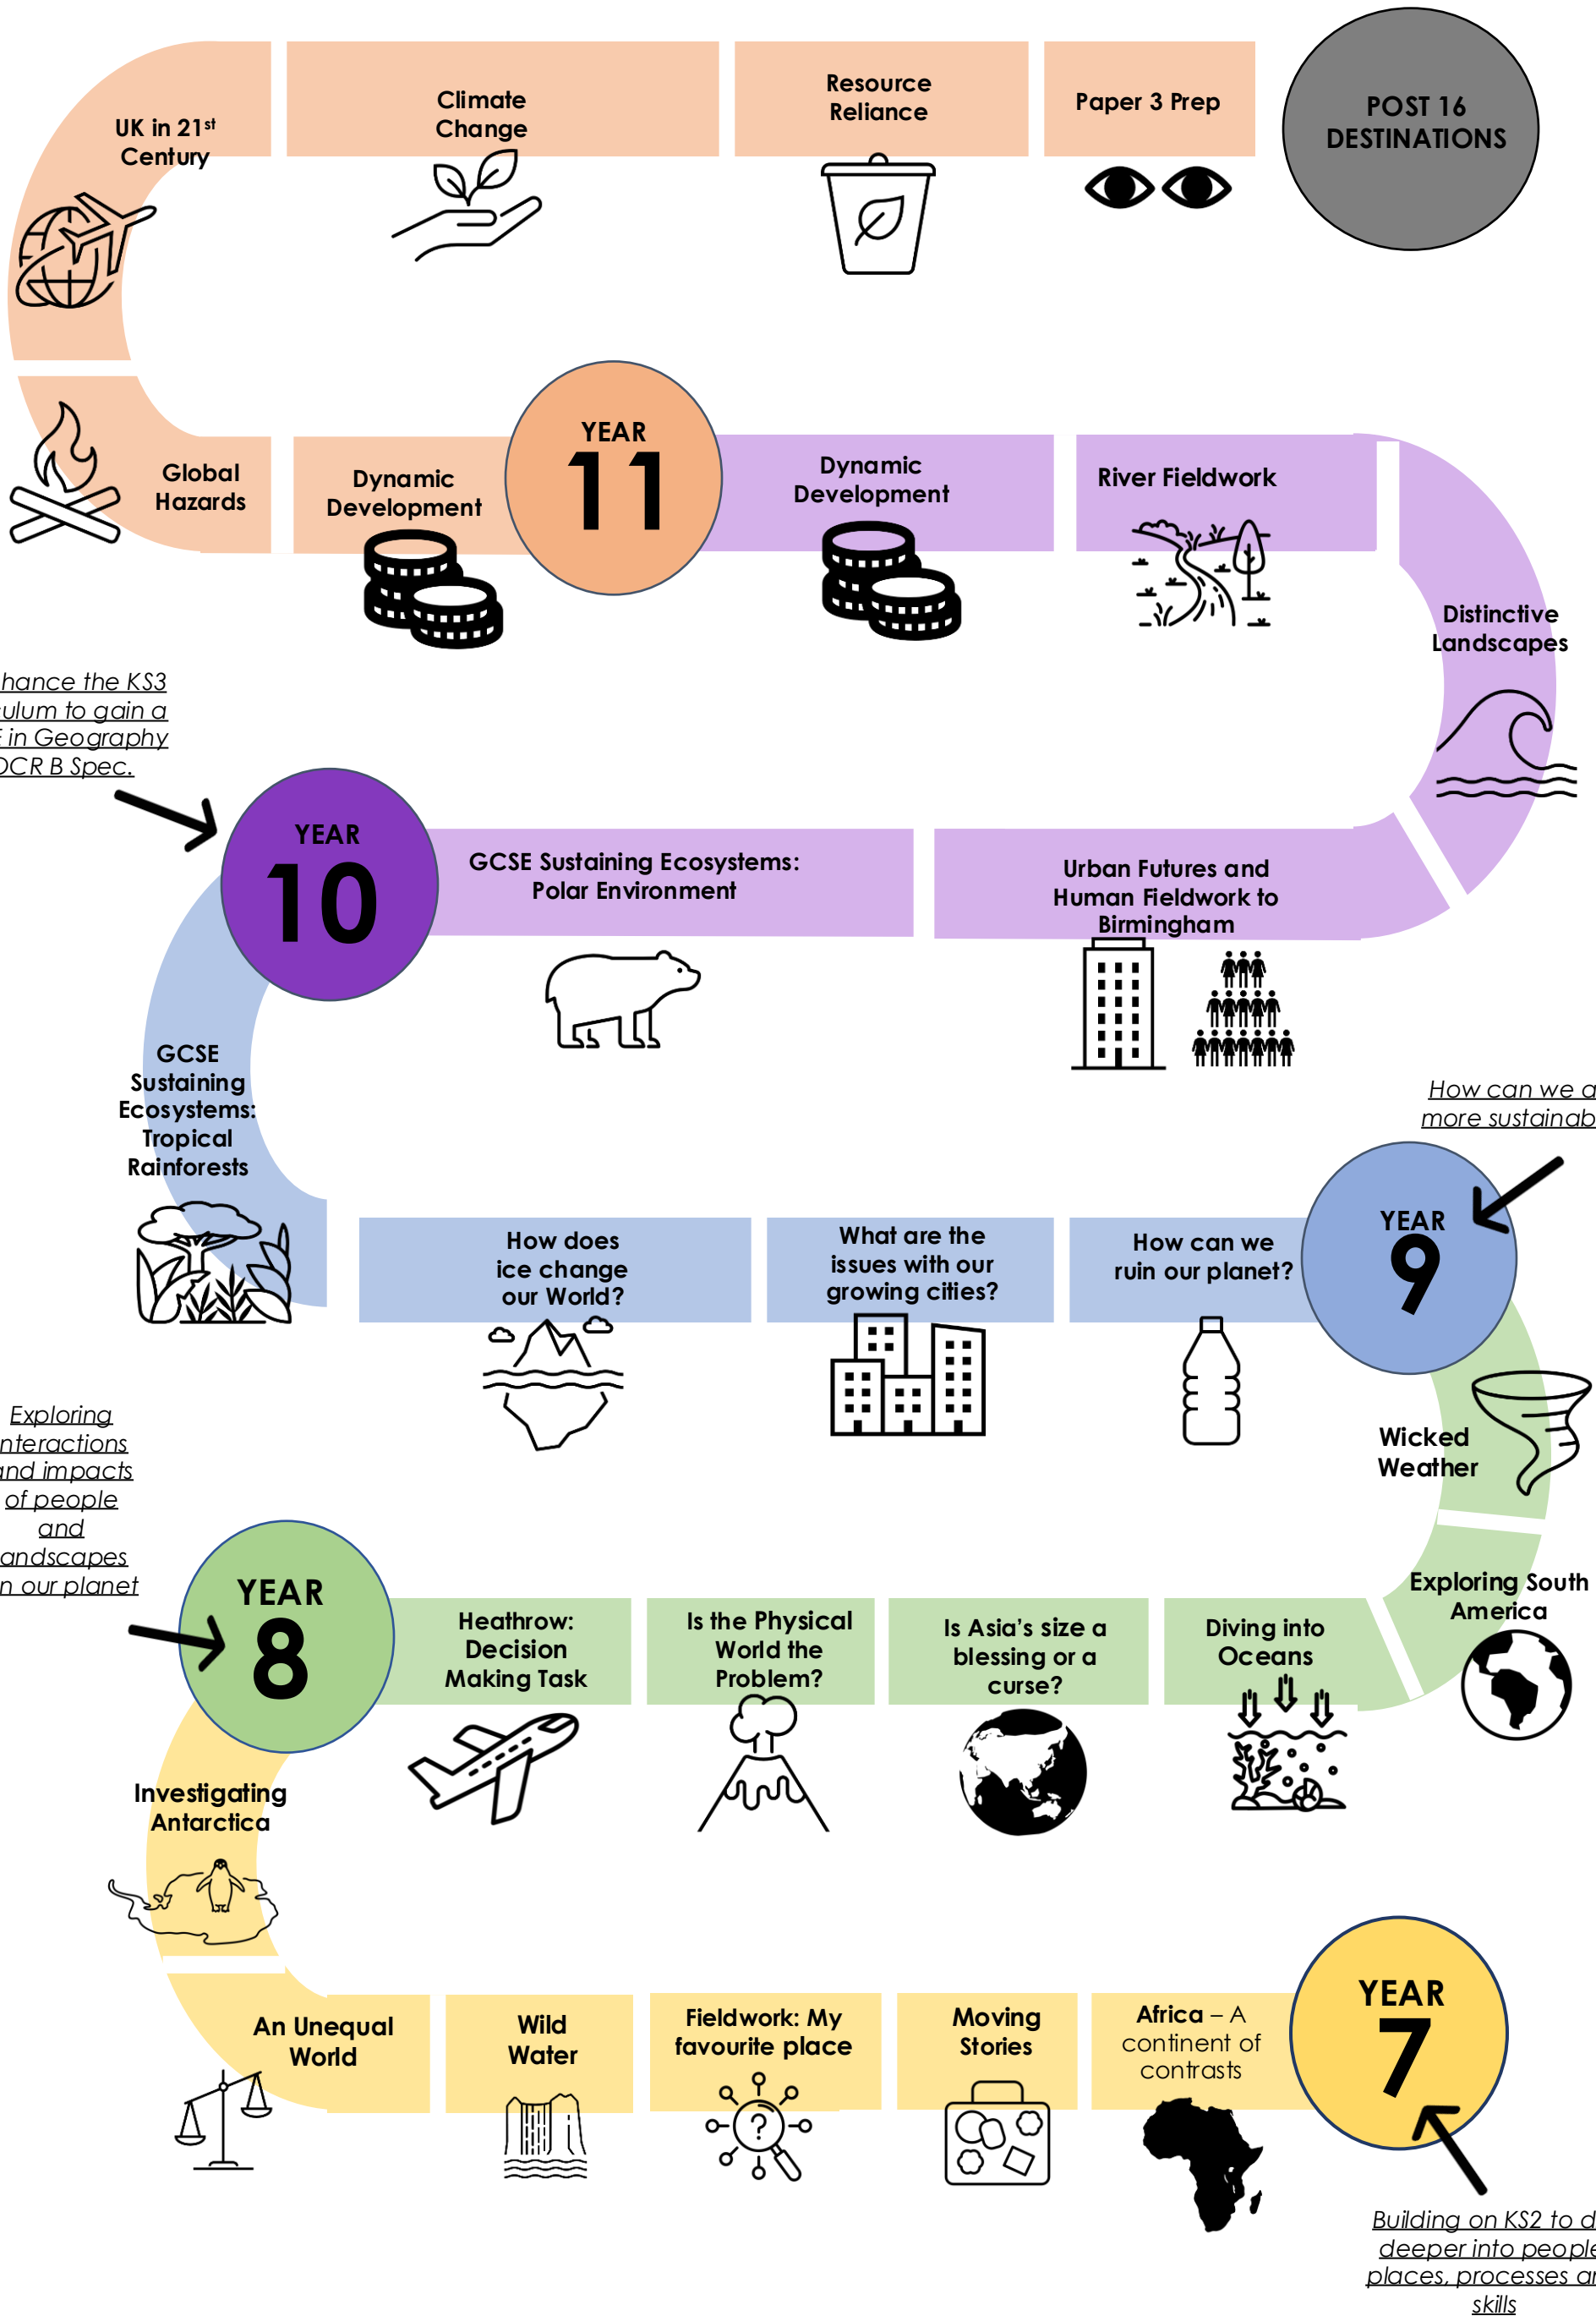

Succeeding Together

**Aims of the subject:**

1. To know **where places are and to compare them.** This will allow me to understand the similarities, differences and links between places over time, and at a range of levels of development and scales.
2. You will study **physical topics and human topics** and see how they form and interact (in a good and bad way).
3. You will **seek sustainable solutions** to issues for people and the planet (and understand why they are not always possible).
4. You will put into **practice employable skills** such as maths, fieldwork, problem-solving, decision-making and teamwork. You will be highly employable.

At GCSE and A Level you will study the OCR specification – Geography for Enquiring Minds at GCSE. It will allow you to explore real world and contemporary issues through an enquiry approach. You will be 'Thinking like a Geographer' to prepare you for further studies or the future work place.

**“Whatever you do, work at it with your whole heart, as though you were working for the Lord.” Colossians 3:23**
